8. Logic and content

Logic twists

Stages 3a and 3h - behaviour preserved, implementation changed.

Unit	Was	Now
ScreenGlob	map-of-lists scanned per call	lazily built lowercased inverted index; 16 self-mapping rows dropped
ScreenGlob.keyFor	while loop over an Iterator	asSequence().firstOrNull
ScreenGlob.matches	name	renamed refersTo
LocalDigitResolver	runCatching per field	single inline probe helper
LocalDigitResolver	line-type when block	lookup table
LocalDigitResolver	inline region choice	extracted parseRegion + orNullIfBlank
LogViewModel	int day bucket + -1 sentinel	private DayBucket enum carrying its @StringRes
LogViewModel	matches(filter, type)	LogScope.admits: CallFlavor? property
LogViewModel	manual mutableListOf loop	buildList with pre-sized capacity
LogViewModel	repository / allCalls / query	history / source / needle

Content rewrite

Stages 4 and 5.

Area	Detail
Default strings	49 strings of 40+ chars rewritten
Locales	29 keys x 11 locales = 319 fresh translations
Format specifiers	snapshotted before and diffed after - zero drift across 12 files
Brand leaks fixed	82 replacements: CallerID, Caller ID Phone Lookup, calleridphonelookup
Policy URLs	now sites.google.com/view/calleridlookuphome - SITE DOES NOT EXIST YET
Illustrations	4 webp files hue-rotated +22.5 deg to the new brand
Lottie	7 raw JSON files: internal nm layer names replaced, re-serialised compact
Short labels	~500 left alone - common vocabulary, no plagiarism weight

9. Restyle, analytics, cleanup

UI restyle

Stage 3i.

Change	Detail
Corner radii	61 bumps across 58 drawables; full pills untouched (21 remain)
Borders	1dp @color/outline on 22 curated card/tile/row/sheet surfaces
Not done	oval to squircle - 68 ovals mix avatars with radio dots, needs per-file judgement

Analytics

Stage 6.

Change	Detail
boot_completed	new - BootSignalReceiver had no analytics at all
gate_overlay_allow	new - nothing logged the SYSTEM_ALERT_WINDOW path
gate_full_screen_intent_allow	new - same gap on the FSI path
logGateResult()	new counterpart to logPermissionResult for Settings-driven gates
28 names normalised	Permission_READ_CALL_LOG_Allow -> perm_read_call_log_allow
Verified	all within Firebase's 40-char limit and matching [a-z][a-z0-9_]*

Cleanup

Stage 7.

Change	Detail
Comments stripped	34,630 -> 30,467 Kotlin lines; all XML re-parses
Dead resources	84 removed, 541 KB - 3 layouts, 5 Lottie, 76 drawables
Detector corrected	naive scan flagged 36 layouts including board_home; 94% false positives
Cause	layouts are reached via the generated XxxBinding class, not R.layout.*
